

Keep your finger on the pulse of your business.

Next-generation remote refrigeration management platform

ENERGY USAGE OPTIMIZATION

Obtain real-time visibility into your current energy utilization across all of your facilities. Energy metrics will be visualized in both power consumption and dollars spent, enabling you to make adjustments that immediately optimize your cost position.

CENTRALIZED VISIBILITY INTO CROSS FACILITY HEALTH

One view of the health of your facilities through a centralized web management platform. The health of your facility is visualized through a simplified and standard set of Key Performance Indicators (KPIs), helping to alert you to issues before they occur.

OPTIMIZED PLANT EFFICIENCY

All data from your in-facility control systems is constantly evaluated against target setpoints, driven by both industry standards as well as facility-specific requirements. Leverage your data to create rich automation routines through the use of IoT Campaigns, helping drive increased visibility and corrective action to unhealthy trends in your operation.

SAFETY & COMPLIANCE

Safety across all of your facilities will be measured through the implementation and continuous monitoring of established KPIs. Regulatory reporting requirements can be automated, removing the need for your team to manually report on an ongoing basis.
